Why PhishTitan is the Best Choice for Protecting Your Customers?

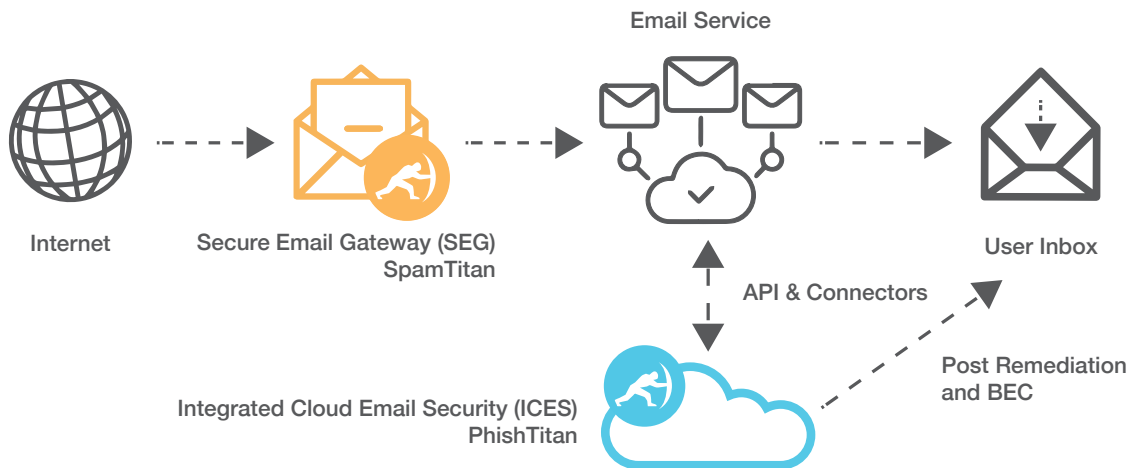

PhishTitan provides next-generation phishing protection and remediation. Our proprietary machine-learning algorithm integrates directly with Microsoft 365, catching and remediating sophisticated phishing attacks Microsoft misses.

With over 345 million paying users, Microsoft 365 is one of the most popular business application suites and has become a popular target for cybercriminals. MSPs must ensure they can offer their customers a multi-layered anti-phishing solution that is cost-effective and easy to manage.

Phishing Protection Built for MSPs

PhishTitan's multiple layers of analysis and detection methods, offer unbeatable anti-phishing accuracy for zero-day attacks, with minimal false positive results. The PhishTitan MSP management portal provides a multi-tenant view that gives you everything you need to manage your clients effectively without having to drill down to the individual customer level. You can create your customer, connect their M365 account, and start the mail flow through PhishTitan in less than 10 minutes.

How it Works - Secure Email Gateway v Integrated Cloud Email Security

PhishTitan works inline within M365 and scans all internal and external emails. You have full 360 coverage. The email security market is moving at pace toward inline phishing solutions: in 2025, **Gartner predict 25% of all email security will be inline/integrated (growing from 5% in 2022).**

Unparalleled Threat Intelligence & High Detection Accuracy

PhishTitan delivers your clients best-in-class phishing protection for M365 by offering an additional layer of that catches sophisticated phishing and BEC attacks over and above Microsoft

- ✓ PhishTitan offers the highest detection accuracy possible. This puts a stop to phishing attacks by analyzing and identifying threats using:
